

WALDNER DOSOMAT 20 Inline

Example of an application Butter / margarine / spreads

The DOSOMAT 20 Inline Compact shown on the picture was especially developed for filling medium or high-viscous butter, margarine products and low-fat spreads.

The machine is equipped with a laminar-air-flow cabinet of pharmaceutical quality, suitable for CIP/SIP cleaning and therefore meeting the highest sanitary standards. In spite of its compact design, the DOSOMAT 20 Inline offers enough space to add cup and lid sterilisation units, if desired, at a later date.
